# COLLECTION RANGE 2023

In this book, we give you an impression of **URBANA®** street furniture.

The Collection range is specially designed for and with URBASTYLE by designers from all over the world. Our designers and architects have created specific concrete street furniture for a better, more friendly, more accessible or greener environment.

On the last pages of this catalogue you find an overview of Collection products available.

**LET THE IMAGES INSPIRE YOU!**

# MATERIALS

## HRAC HRAC

URBASTYLE by BAGATTINI is the only manufacturer to use **H**igh **R**esistance **A**rchiteconic **C**oncrete for its products. The HRAC has been developed in-house after long research but the outcome is astonishing. Through its special proprietary mix design, it is the concrete which is most suitable for the southern climate: higher strength, lower absorption, longer durability and aesthetically the best! HRAC is available in many colours and multiple finishes. Check our website for all different options.

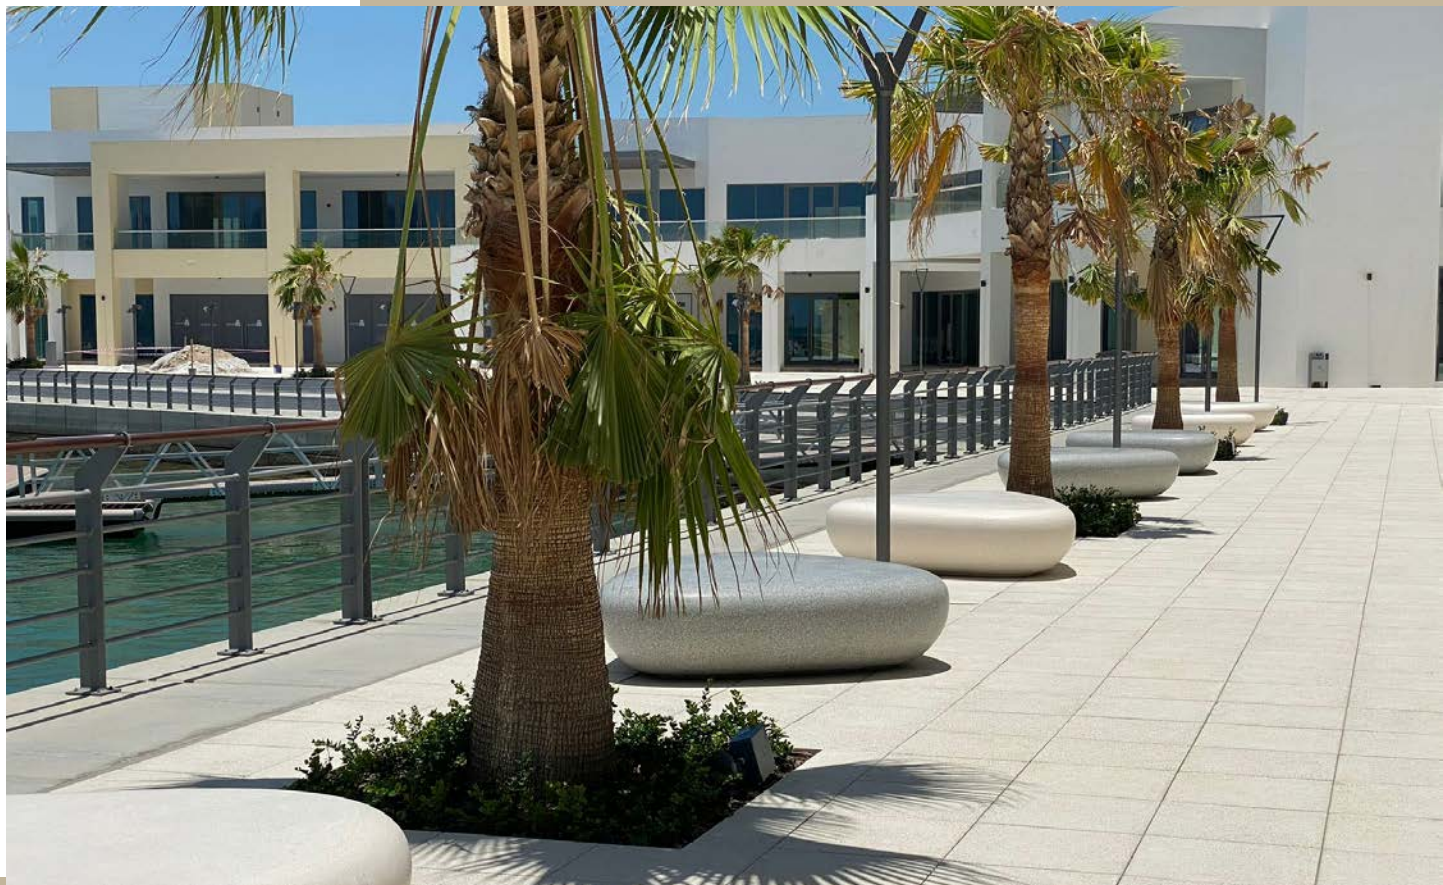

## UHPC UHPC

**U**ltra **H**igh **P**erformance **C**oncrete is great for the design of more resistant, slender and durable products. UHPC incorporates structural synthetic macro fibers in mass and has micrograde aggregate, allowing the production of very resistant and lightweight elements, incompatible with the nature of traditional concrete. UHPC can present non uniform cloudy effects of colour and light cracks, which are physiological aspects of this material UHPC is available in grey, white and black in smooth or polished finish.

# COLLOURS

CS POLISHED

A decorative line art graphic of a city skyline, rendered in a light brown color. The skyline features various building shapes of different heights and widths, with some having pointed roofs and others being more rectangular. The lines are thin and the overall style is minimalist.
